

THERApee
by Dr. Sagie

The Only Worldwide Online Home Bedwetting Treatment

In a nutshell:

- Tens of millions of children worldwide suffer from bedwetting.
- No appropriate solution is offered.
- Our ultimate clinically proven solution - TheraPee - The Online Home Bedwetting Treatment, developed by world-renowned bedwetting expert, Dr. Jacob Sagie
- **By partnering with TheraPee, you can realize high economic potential.**

Prevalence: Enuresis (bedwetting) affects tens of millions of children worldwide.

Current solutions are not solutions: No appropriate solution is offered to those suffering from this condition. Very few clinics routinely manage enuretic patients, which they consider a medical problem. The current treatment model is drug therapy, with an extremely high relapse rate. Some clinics treat patients with a bedwetting alarm which is only effective in up to 50% of patients when supervised by a professional.

Who we are? We're an Israeli family business, established by **Dr. Jacob Sagie**, Ph.D. Dr. Sagie is a world-renowned enuresis specialist, active in the field since 1984, with clinical and research experience of more than **40,000** enuretic patients, ages 4-35. Dr. Sagie is the director of ten enuresis clinics in Israel. Through online sessions, he treats patients from all over the world.

Dr. Sagie has discovered that, in most cases, bedwetting is not a medical or psychological problem, but instead stems from deep sleep. Bedwetting has clear genetic factors.

His unique Multi-Modality face-to-face treatment for bedwetting is clinically proven, with a **success rate greater than 90%** within 3-5 months of treatment inception. It combines an exclusively developed device together with a unique treatment plan. The treatment is tailored to each individual.

What is THERApee™

THERApee™ is a computerized online system for bedwetting treatment. The development team, transferred Dr. Sagie's treatment model into a state-of-the-art Interactive Enuresis Web Home-based software program called THERApee™. By identifying and aggregating every possible scenario that the therapist might face during our current treatment process, TheraPee developed every possible enuretic patient profile employing sophisticated and complex algorithms **Through those algorithms, the online tool can offer similar responses to those given in our one-on-one clinics.**

Parents supply the information regarding the treatment using a "virtual chart". The system analyzes the data provided and the algorithm chooses the right response.

The patient watches the response via a sequence of pre-recorded **video clips** where the "virtual therapist" addresses the patient and his parents, gives feedback concerning the patient's progress, outlines assignments and presents statistic reporting progress

STOPEE™ - **The most advanced and safest bedside bedwetting alarm on the market** is an integral part of the solution. The alarm, based on the latest technology and includes unique features. Since it doesn't use a radio transmitter, there is no risk of radiation. There are no wires or objects attached to the child's body. The alarm meets all CE and FDA requirements.

Advantages of THERApee™

- The first and only online bedwetting treatment in the world, allowing every child worldwide to achieve outstanding results in the comfort of their own home.
- No geographical and language barriers. Accessible to every child.
- A fraction of the cost compared to in-person treatments.
- Developed and designed by leading enuresis specialists.
- Duplicates Dr. Sagie's "face-to-face" treatment, which has a success **rate of more than 90%**.
- Uses **STOPEE™**, the most advanced and safe bedside bedwetting alarm on the market. Meets all FDA and CE requirements.
- Tailored to the individual patient and takes into consideration all aspects of enuresis.
- Medication free. No expensive medical tests or drugs are involved.
- Helps the environment by saving on pull-up use.
- Flexible - Appointments do not rely on clinic opening hours.
- Provides all the necessary information and tools to work independently.
- Totally private and confidential. Treatment is conducted in the child's natural environment, avoiding embarrassment and fear.
- Suitable for children and teenagers between the ages of 4 and 18.
